

# Compose™

calming liquid

- ◆ **Tried & Tested by Trainers**
- ◆ **Calm without deadening**
- ◆ **Improve Performance**
- ◆ **All Natural - No Drugs**
- ◆ **Test Free**

### *When a horse underachieves because of stress...*

Horses that perform well during training can lose their ability to concentrate owing to the stress of transport, the commotion and distraction of a different environment and the enervating events at competitions. As a result, they respond less attentively and sometimes do unexpected things. Stress caused by fear of the unknown also occurs in young or inexperienced horses during training and they can then react violently. Stress not only affects the horse's performance, but its condition too. Avoiding stress is therefore very important. Apart from calming by the trainer and/or groom and gaining sufficient experience, Compose may help considerably. Compose is used with good results in:- horses that are 'spooky' during a competition;- Some horses that are too temperamental during training;- horses that are susceptible to stress;- Stallions in sports. Compose is especially effective for horses which only show 'spooky behavior' at competitions and to a lesser extent for chronic nervous horses.

### **Composition and Safety of the Product**

Compose is a dietary liquid based on herbs and contains elements that counteract hypersensitivity. Irritability through noise, light and shade, changes in temperature, unexpected movements, other horses, strange situations, etc. is replaced by a calming effect that does not interfere with the ability to concentrate or with motor function. Because Compose is strongly diluted, it has no secondary effects whatsoever: no residues and no adverse effects on the liver or kidneys. Compose contains a.o.: (see packaging for label values) magnesium, tryptophan, herbal extracts, vitamin B1, B6, B12. Compose contains no constituents that are prohibited in competitive sports.

### **Application**

The recommended dosage of Compose per animal per day is 20-40 grams per animal , 45 minutes to two hours prior to competition. Compose can be administered daily. Suggested 20-40 grams per day depending on the size of the horse and effect desired.

Available in 16oz (473ml)  
or Economical Stable Size  
1 gal (3.78L)
